

President: Genial/Quaest, 10–13 Aug 2026

● Poll or election result

● AI recommendations, models weighted equally

▲ AI recommendations, models weighted by how often they name one

Full profiles, specific-candidate wording, answers that settle on one candidate; profiles weighted by their population share in Neto's segmentation, configurations weighted equally. Poll shares rescaled to valid votes, undecided and blank excluded. Not a forecast. The triangle weights configurations by how often they name one candidate, so it is close to Grok's answer.
