

Meeting the rule: share of 132,868 full-profile capture

Presidential answers, by what the capture retrieved

ChatGPT web, full profiles, specific-candidate wording. Left: all complete captures; a page about the rule is either the text of Resolucao TSE 23.755/2026 or a news item or explainer about the rules for AI in the election, retrieved during the answer's search whether or not the link was shown; the ban mention is a keyword rule. Right: labelled presidential captures, prompts weighted equally, by what the capture retrieved. An association inside the web traces, not a causal test.
